Updated in 5th October 2014

MKT CF 21

After Chain Cleaning,
use  Chain Lube
for better results

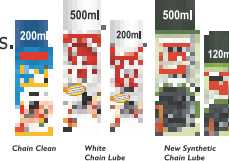

LUBRICATION

1.0 PERIODICAL RE - LUBRICATION EVERY 500 Kms

- Periodical Re-Lubrication every 500 km for Sealed Chains.
- Rolon Chain lube / SAE 90 Oil For Re Lubrication
- In the sealed chains, lubrication is provided by grease sealed by seal rings.
- Though Lubrication is present in the Bearing area, Still External Periodic lubrication will decrease wear and heat between roller and bushings, which provides better performance in chains
- Lubrication also keeps the seal rings in good condition and more frequent re-lubrication is required when the chain is working in harsh environment.

1.1 Lubrication with spray

- Place the bike on the center stand, rotate the rear wheel in reverse direction while Re-lubricating.
- Spray the lubricant inside the chain between. Inner plate & Outer plates. near the rear sprocket to the entire length of the chain
- Spray the lubricant inside the chain between roller and bushings.
- After lubrication wait for 15 mins.
- Excess lubricant should be wiped with a clean rag before use.

2.0 CLEANING & RE - LUBRICATION METHOD

- Dirt will reduce the chain life in no time.
- If the chain is not too dirty, the operation of lubrication is normally sufficient to clean the chain
- When the accumulation of dirt on the chain (Sand, Mud, Asphalt particles (or) other foreign materials) is excessive, the chain must be cleaned / washed.
- Use Rolon chain clean / mixture of SAE 20W40 oil and kerosene in the ratio of 1:1 for cleaning the chain with "Soft" Brush (Nylon Type)
- After Cleaning, the chain has to be dried immediately.
- And then dip the cleaned chain in SAE 90 oil.

3.0 CAUTION

- Avoid use of steam, thinners (or) solvents such as petrol & benzene.
- While cleaning never use of hard brushes (or) other methods which will damage the seal rings.
- Ensure no damage in spring clip while fitment.
- Ensure spring clip open end facing opposite the direction of chain travel.
- Seal ring chain should always be replaced as a kit (Chain & Sprockets) only.

SEALED RING CHAINS

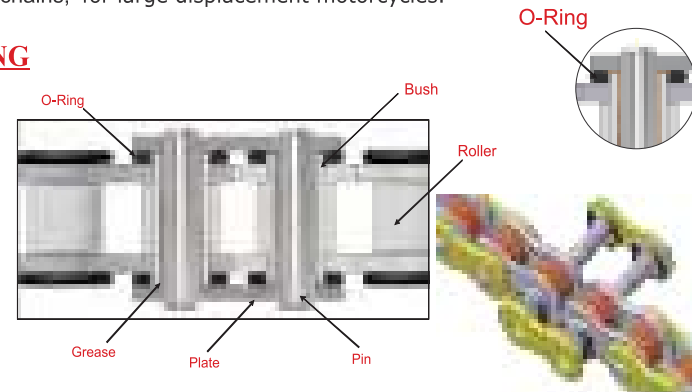

100% TO OEMS

NOW IN REPLACEMENT KITS

ROLON SEALED RING MOTORCYCLE CHAIN

ROLON Sealed Ring Chain has dramatic improvement in durability performance, since grease is sealed between the Pins & Bushings by O-Ring / X-Ring. Sealed Ring Chains are truly remarkable in Wear resisting performance and expected to last longer than ordinary construction standard chains, for large displacement motorcycles.

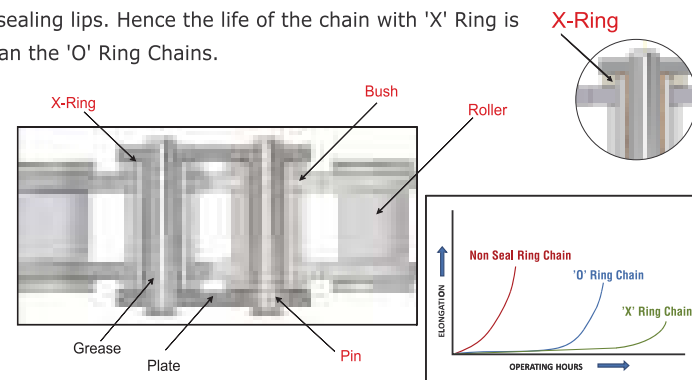

'O' RING

'X' RING

X - Ring's four contact points greatly increase sealing performance.

Retains the grease inside, in a better way than 'O' Ring since it has four sealing lips. Hence the life of the chain with 'X' Ring is higher than the 'O' Ring Chains.

Model & Year		Bajaj XCD DTS -Si		
		125CC	135CC	
Description		R420BS-122-1	R420BS-122-1	
Chain		15 Teeth		
Drive sprocket & Spline Dim		W=4,MD=17, ID=13		
		W=4,MD=17, ID=13		
Rear Sprocket & Mounting details		42 Teeth	42 Teeth	
				
Packed model for / kit No		123	140

CHAIN SPROCKET KITS

Chain maintenance

1. Do lubrication with **ROLON** chain lube for better life & Performance or SAE 90 oil at every 500 km
2. If the chain is too dirty, remove the chains, clean & lubricate
3. Avoid use of steam, Thinner or solvents such as petrol & benzene
4. After lubrication, adjust the chain slack, refer chain maintenance guide for details

ROLON Chains are specially
"VACUUM GREASED" for better
 retention of grease in the chain.

NEW "SAFETY" LINK ADVANTAGES

- Greater Connecting Strength.
- Improved Fatigue.
- Avoids Spring Clip Damages
